

# Cyber Security Tracks

## Cyber Security Basics \*

\* At least elementary knowledge of ICT and cyber security is a prerequisite for any training in Cyber Security Tracks. The „Cyber Security Basics“ course covers the most important topics and its completion is strongly recommended for all learners who lack previous practical experience in cyber security.

### Cyber Security Act Track

Set of courses focusing on providing the necessary information to people who were appointed to one of the roles defined by the Cyber Security Act in their organizations.

### ISO Track

Specialized certified training designed mainly for specialists responsible for ISMS implementation and audit.

### ITIL Track

Courses providing advanced knowledge of ITIL process management methodology.

### Forensic Analysis Track

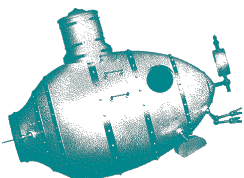

Courses covering basic and advanced practices and techniques in the field of forensic data collection with respect to current legislation and relevant international standards.

### CompTIA Track

Basic and advanced courses covering various aspects of information security and preparing learners for the internationally recognized CompTIA certification exams.

### Technical Track

Highly technical courses created by Alef specialists and their partners, providing complete training in various fields of information security, from malicious code analysis to penetration testing.
